## OBJECTIVE

MERN stack developer with practical experience in building end-to-end web applications. Comfortable working across frontend and backend, with a focus on user experience and performance. Strong understanding of JavaScript, REST APIs, and modern development workflows. Looking to gain industry experience and contribute to real-world solutions.

## EDUCATION

**National College of Business Administration and Economics**

Lahore
2025

*Bachelor's in Computer Science*

## Projects

### Online Code Editor — React, Node.js, Express, MongoDB

A web-based code editor where users can write and preview HTML, CSS, and JavaScript in real time.

- Built a full authentication system with user sign-up, login, and project storage.
- Enabled users to create and manage multiple projects, each with its own HTML, CSS, and JS files.
- Implemented a live preview feature that updates output instantly as users type.
- Stored user data and project files in MongoDB; deployed using Vercel

### Weather App — React, Tailwind CSS, OpenWeather API

A responsive weather application that displays real-time weather data based on user search.

- Integrated OpenWeather API to fetch live weather info for cities, states, or countries.
- Built a clean, mobile-friendly UI using Tailwind CSS with real-time search functionality.
- Displayed detailed weather metrics like temperature, humidity, wind speed, and weather conditions.
- Handled API errors gracefully and added loading states for smooth user experience.

### File-Based CRUD App — Node.js, Express, EJS

A server-rendered CRUD application that manages data using the local file system instead of a database.

- Used Express with EJS to render dynamic pages for creating, viewing, updating, and deleting records.
- Handled all CRUD operations using Node.js core `fs` module for file-based data storage.
- Implemented clean routing and modular controller structure for better code organization.
- Designed a simple UI with EJS to interact with stored data in a user-friendly way.
